September 26th - Reducing Complications in Esophagus Surgery

Esophageal cancer remains one of the most prevalent cancers globally and a leading cause of cancer-related mortality. Among the various treatments available, three-field lymphadenectomy has recently gained significant attention. Originating in Japan in the 1980s and now utilized in several other countries, it continues to be a topic of active discussion, especially in the context of contemporary neoadjuvant treatments.

This upcoming webinar will bridge Japanese and European perspectives on this critical topic. We will explore best practices and review evidence on reducing complications, providing valuable insights for surgeons worldwide.

Join us on **September 26th at 9 pm Tokyo Time** at [AIS](https://aischannel.com) to have your questions personally answered by leading experts in their fields.

PROGRAM

- 1. JSES Introduction**
- 2. Welcome & Introduction - Prof. Hiroya Takeuchi (Japan)**
- 3. Precise Upper Mediastinal Dissection for Esophageal Cancer and Future Perspective of Three-Field Lymphadenectomy - Dr. Shigeru Tsunoda (Japan)**

- 4. Classification and Treatment of Anastomotic Leakage** - *Prof. Dr. Richard van Hillegersberg (Netherlands)*
- 5. Panel Discussion** - *All faculty moderated by Prof. Hiroya Takeuchi (Japan)*
- 6. Closing Remarks** - *Prof. Hiroya Takeuchi (Japan)*

FACULTY (by alphabetical order):

Prof. Dr. Richard van Hillegersberg - *MD, PhD, Professor of Surgery and Consultant of Surgical Oncology, Department of Surgical Oncology, Cancer Center, University Medical Center Utrecht, Netherlands*

Prof. Hiroya Takeuchi - *MD, PhD, FACS, Professor and Chairman, Department of Surgery, Hamamatsu University School of Medicine, Japan*

Dr. Shigeru Tsunoda - *MD, PhD, FACS, Junior Associate Professor, Department of Surgery, Graduate School of Medicine, Kyoto University; Director of Esophageal Cancer Unit, Kyoto University Cancer Center, Japan*
